

Why BBG?

The Berkshire Botanical Garden is much more than a display garden - it is a place to interact with, learn from, and live with nature. It is also where the community of Berkshire meets and shares the joyful moments together.

Our team is especially interested in working on detailed hard landscape and planting designs of small to medium scale projects, putting our imagination of the future living environment into the real world - a diverse, harmonious and inspiring landscape that promotes the well-being of human by educating them about, and getting involved in “nature”.

We see the design proposal for the new Entry Garden of the Berkshire Botanical Garden as a great opportunity to celebrate the “harvest” from nature through a physical design. At the same time, this would enrich the learning and spiritual experience at BBG.
